

## We Know Education...

The Hammer Tech consulting team includes several consultants who, as a collective, have over a century of experience in public (K-12) education. This team helps districts answer some of the most important questions that are top of mind for district and community leaders:

- IT Department Operational and Service Review – Is the IT department meeting the district’s needs?
- Strategic Planning – Do you have a strategic plan? If so, who was involved in its development?
- Capital Projects – Do you have capital projects on the horizon? Renovations? New Buildings?
- Student Experience – Is your technology helping or hindering learning?
- Performance – Is your computer network providing the performance your district demands?
- Staff Engagement – Are you including your staff in your technology decisions and learning?
- Continuity of Education – If the unforeseen were to occur, are you capable of continuing to educate your students?
- Competitive Advantage – Is your technology helping to drive a superior experience to draw and retain students to your schools?

Founded in 1978, Weidenhammer has its roots in education. Over 43 years ago, Weidenhammer got its start developing solutions within the IBM mainframe (now referred to as Power Systems) family of technologies. Our focus was providing school districts with cost effective compute solutions to help them run their organizations. Our tradition of helping schools leverage technology to improve operations and student learning experiences continues today!

Weidenhammer is a nationally recognized strategy and technology consulting firm focused on driving measurable results in improving the student experience, staff productivity, and operational efficiency. Possessing a wide range of consulting, design, development, marketing, and engineering expertise — along with best-in-class technologies and strategic partnerships with industry-leading organizations – Weidenhammer has helped thousands of organizations innovate and succeed in a digital world.
